**Outcome:** Design a set of Hawaiian marine organism game cards. The cards will show your understanding of Hawaiian marine species and the adaptations they have made to live within their environment.

Game Cards: You will design 6 game cards. Each card has a section where you will write 3 adaptations about your marine organism. You will write two adaptations that are true and one that is false (see card template).

Use the website in step 8 of the Steps page—"different Hawaiian marine organisms", to identify adaptations for your 6 game cards.

Once you finish your cards, play the Two Truths & One Fib game with other student: Take turns sharing one card at a time with another student. You will read the information and adaptations your card and the other person must guess the “fib.” Repeat until you both have shared all of your cards. Repeat with other students.

Materials needed:

- example and format
- Card templates

How to complete the task:

1. Review the “format” and example sheet
2. Download the card templates
3. Identify at least 6 marine organisms found in Hawaiian waters (1 organism may be your favorite from the Adaptation worksheet).
4. Research more about the 6 marine organisms you selected
5. Create card content
6. Locate pictures
7. Print out cards
8. Cut out cards
9. Ask someone to proofread your 6 cards
10. Play the Two Truths and one Fib Game with other students in your class.
